

Carbon Reduction Plan

Company: Margaret Cleaning Solutions Ltd

Date: November 2024

1. Our Commitment

Margaret Cleaning Solutions Ltd is a local commercial cleaning company committed to operating responsibly and sustainably. We are dedicated to achieving Net Zero carbon emissions for our operations by 2035, in line with the UK's climate goals and our clients' sustainability standards.

2. Current Emissions

As a small business, our main sources of carbon emissions are:

- Fuel used by company vehicles for travel to client sites
- Electricity used for office operations and equipment charging
- Indirect emissions from purchasing cleaning supplies and waste disposal

We currently measure our fuel and energy use to establish an annual baseline. These figures will be refined as we expand our monitoring.

Emissions Source	Estimated Annual Emissions (tCO ₂ e)	Reporting Year
Scope 1 (Vehicles)	4,73	2024
Scope 2 (Office electricity)	1,12	2024
Scope 3 (Supplies, waste)	0,76	2024
Total Emissions	6.61	2024

Note: These estimates will be updated annually as our measurement methods improve.

3. Our Targets

To reach Net Zero by 2035, we will:

- Reduce our vehicle fuel emissions by switching to fuel-efficient or electric vehicles where possible.
- Improve route planning to reduce mileage.
- Reduce energy use in our office by upgrading to low-energy lighting and appliances.
- Work with local suppliers to minimise supply chain emissions.
- Use eco-friendly cleaning products and methods wherever possible.

4. Actions Taken

So far, we have:

- Registered with sector-specific Net Zero tools to track and improve our progress.
- Started measuring our fuel and energy consumption.
- Switched to local suppliers where possible to reduce transport emissions.
- Trained our staff on sustainable cleaning practices.

5. Declaration and Next Steps

We review our carbon reduction activities every year and will publish an updated plan annually to show our progress towards Net Zero.

Signed,

Malgorzata Stawicka
