

MARGARET CLEANING SOLUTIONS LTD

CARBON REDUCTION PLAN 2026

Our Commitment to Net Zero by 2035

Company Registration Number: 12307106 | Reporting Years: 2024 and 2025 | October 2026

1. Commitment to Net Zero

Margaret Cleaning Solutions Ltd is committed to reducing its environmental impact and achieving Net Zero greenhouse gas emissions by 2035. We monitor our carbon footprint, improve resource efficiency and implement practical measures to minimise the environmental impact of our cleaning operations.

2. Carbon Emissions Assessment

Our initial emissions baseline was established in 2024. Following a review of financial and operational records, we have refined our assessment methodology to improve accuracy and consistency.

Estimated Scope 1 – Company Vehicle (Diesel)

Emission source	2024	2025
Company vehicle – diesel	5.57 tCO ₂ e	7.50 tCO ₂ e

Figures are preliminary estimates based on fuel expenditure, indicative diesel prices and greenhouse gas conversion factors. The original 2024 plan reported 4.73 tCO₂ e for Scope 1; the revised estimate reflects a change in calculation methodology and remains subject to verification.

Scope 2 – Electricity

The company operates from a home-based office without separate commercial premises. Cleaning equipment at client locations uses electricity provided by clients. Scope 2 accounting boundaries remain under review.

Scope 3 – Indirect Emissions

Our assessment considers purchased cleaning supplies and protective equipment, employee commuting (primarily by bus), and waste arising from cleaning operations. We are improving data collection; a complete Scope 3 total has not yet been finalised.

3. Carbon Reduction Progress – 2026

In 2026, we replaced our diesel company vehicle with a Volkswagen Tayron plug-in hybrid, regularly charged overnight. The vehicle continues to use some petrol and electricity; actual emissions reductions will be assessed using consumption data.

4. Our Carbon Reduction Initiatives

Sustainable transport: Efficient journey planning and lower-emission vehicle use.

Responsible products: Preference for suitable environmentally responsible and concentrated cleaning products.

Waste reduction: Waste segregation, recycling and reduced unnecessary packaging.

Sustainable commuting: Encouraging public transport where practical.

Energy and water efficiency: Responsible consumption during cleaning activities.

Employee awareness: Guidance and training in sustainable cleaning practices.

5. Environmental Targets

We will review emissions annually, improve Scope 1–3 reporting, reduce transport-related emissions, increase responsible purchasing, minimise waste and work towards Net Zero greenhouse gas emissions by 2035.

6. Monitoring and Declaration

Our environmental performance and carbon reduction actions will be reviewed annually. We will update this plan as improved emissions data becomes available and explain material changes to our methodology. Margaret Cleaning Solutions Ltd confirms its commitment to environmental responsibility and continuous improvement.
